Detailed Action

Allowable Subject Matter

1. The following is an examiner's statement of reasons for allowance: regarding claims 1 and 12 the relied on prior art does not teach or suggest using a metal doped Y-alumina having a pore volume of at least $1.0 \text{ cm}^3/\text{g}$ for the reduction of nitrogen oxide (Nox) in an oxygen rich engine exhaust. While Narula does teach a metal doped Y-alumina having a pore size of 45 angstroms (Col 3, lines 60-61), Applicant argues Narula et al that the sol gel process used by Narula inherently results with smaller pore volumes than what applicant has claimed. Additionally, Applicant's method of making Y-alumina has yielded unique properties for utilization in plasma-assisted catalysis (PAC) of oxygen rich exhaust.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
